

4th March 2016 London deltaDOT continue to work towards CFR21/11 compliance

deltaDOT are pleased to announce solid progress with compliance to the FDA CFR21/11 compliance.

While the P3Controller system management software and the P3EVA analysis package have been compliant for some years, the software quality systems had not been implemented. Working with Optra Systems of California, deltaDOT will soon be able validate the entire software package of the HPCE-512 analysis system.

CSO, Dr, Stuart Hassard commented "We are currently undergoing a validation and auditing exercise on our software and processes to ensure we are offering proper compatibility with CFR 21 part 11 requirements. While most of our current clients are in R&D and upstream in the bioprocess, this will enable the company to extend their analytical footprint further downstream with full regulatory compliance"
